

THREE-YEAR ACADEMIC COURSE

European Bachelor of Science in Design

Awarding of the qualification requires B2 Language Certification

FASHION DESIGN: PROJECT & RESEARCH

accredited by  **EABHES** | European Accreditation Board of Higher Education Schools

Duration	ECTS	Language	Attendance
3 years	180	Italian	20h per week

The course combines artistic and digital drawing and design skills with solid knowledge of couture and industrial pattern making, training professionals who are able to understand every stage in the production of an outfit. Throughout the programme, students are encouraged to develop the skills required to design fashion collections, using advanced representation techniques and innovative software, including artificial intelligence and CLO3D for three-dimensional design.

The curriculum also aims to provide students with the tools needed to interpret trends, select fabrics and create coherent garments, all essential skills for working in a fashion design office. Alongside the creative component, the course provides comprehensive training in pattern making for both Haute Couture and industrial production. In this way, young fashion designers acquire the skills needed to enter the professional world, combining innovation and creativity with a solid command of the production fundamentals required by the fashion industry.

Classes begin in October.
